

INTRODUCING Time-Of-Day Rate

Watch your usage
sunup to sundown

Save money by using electricity
10p.m. to 6 a.m.

With time-of-day rates, also known as TOD rates, the price per kilowatt-hour is dependent on the time of day it is purchased. Price per kilowatt-hour is more expensive during peak hours. We want to pass the savings of purchasing electricity during off-peak hours on to you!

From 10 p.m. – 6 a.m. every day is considered off-peak. During this time, you will purchase energy at $\text{¢}6.416/\text{kWh}$. On-peak is all other times and this rate is $\text{¢}13.360/\text{kWh}$, this includes a distribution charge of $\text{¢}2.500/\text{kWh}$.

This rate change is currently in effect .

This rate is intended to give members a financial advantage when they shift their power usage to low-demand or off-peak hours.

Check out our website www.hwe.coop for more information and tips on how to use the off peak pricing to your advantage.
